

# Thursday mornings MRes project progress report

PokMan Ho

Date Time: 16-Jul-2020 09:00, 10:30 (lab meeting)

Location: MS Teams

People: James, Samraat, Emma, PokMan

## 1 Topics discussed

1. result graph: comparing harvest modes
2. add one more exploratory question: feasibility vs yield, which is more practical?
3. harvest rate in continuous harvest & harvest interval in destructive harvest are logically different
4. (lab) sewage – initial condition try more carbon?

## 2 Corrections

1. same sample size, no filtering
2. add one more paragraph on literature review: explicitly say research gap (no research was done on this subject) and effort done
3. move harvest rate graph from current combined plot as a separate graph; separate continuous & destructive harvest as two plots
4. x-axis remove units; use words with bracketed symbols
5. one boxplot-type plot per exploratory question
